

SEP 23–24, 2023 | DEC 1–2, 2023

DIGITAL WORKFLOW FOR FULL ARCH TO SINGLE IMPLANT TREATMENT: ENHANCING EFFICIENCY & REDUCING STRESS

**DRS SASCHA JOVANOVIC, NATASA GREGORIC,
MILES MADISON & RAFFI AGHVINIAN, CDT IN LOS ANGELES**

WHAT YOU WILL LEARN

- Learn the advantages of digital planning in implant dentistry and the 3D software options
- Work with the oral scanning process to create accurate STL files and the scanner options
- Understand the CBCT data collection and transfer to a DICOM file
- Learn to plan an implant placement in CoDiagnostix software
- See printer options for 3D printed in-office surgical guides, temporaries etc
- Learn how to design, fabricate and post-process a 3D printed surgical guide
- Understand the design and difference between partial and fully guided stents
- Observe how to scan an implant position with scan bodies during surgery
- Learn tips & tricks while using implant planning software and 3D-printers

WHAT YOU WILL SEE

LIVE full arch patient surgery with 3D surgical and stackable guides, implant scanning protocols with 3Shape and photogrammetry with PIC scanner and the delivery of a 3D printed full arch provisionals.

WHAT YOU WILL DO

- Place implants guided with partial and fully 3D printed surgical guides
- Scan patients and dry models using oral scans to create STL files
- Plan a provided case or your case on Laptops with CoDiagnostix software
- Print surgical guides or temporaries in our digital suite
