

Two-day cadaver course on bone and soft tissue augmentation

Prof. Dr. Thomas De Bruykere, Dr. Faris Younes & Prof. Dr. Jan Cosyn

Content

Bone augmentation with a bone block and guided bone regeneration are the most documented techniques to augment the deficient ridge in the horizontal and vertical dimension. In this 2-day masterclass bone augmentation is discussed from A to Z focusing on biological principles of wound healing, anatomical considerations, intra-oral bone harvesting procedures and the use of biomaterials. Since bone augmentation requires extensive flap advancement, lack of keratinized tissue is a common postoperative finding. Therefore, methods to increase keratinized mucosa will also be thought. Finally, relevant medication is discussed to prepare and support the patient prior to and after surgery.

Surgical procedures

The following surgical procedures are theoretically discussed on the first day and fully practiced on the second day:

- Intra-oral bone harvesting of bone particles and a bone block
- Implant placement and simultaneous Guided Bone Regeneration
- Bone augmentation with a bone block
- Sinus lift with or without simultaneous implant placement
- Free gingival graft
- Bone fixation

New!

- Theory on the first day, leaving the second day completely available for hands on
- Sinus lifting
- Implant placement and simultaneous bone augmentation
- Free gingival graft

Fully-accredited

70 accreditation units requested in domain 6

Practical information

- Friday the 30 th of August: theoretical part from 13h until 19h in Auberge de Pêcheur
- Friday the 30 th of August: dinner at 19h in Auberge de Pêcheur
- Saturday 31 st of August: practical part on cadavers from 9h until 17h in Anatomy lab UZ Gent (Entrance 23)

Subscription fee

for the whole course including all coffee breaks, the dinner on Friday evening and the lunch on Saturday: 1200 euro for ITI members, 1500 euro for non-ITI members.

Excluding hotel stay. This needs to be booked by the participant itself.
