COURSE CONTENT

ALL-ON-X PROCEDURE HAS BEEN DEVELOPED FOR MANY YEARS.

Can a terminal dentition patient experience a healthy oral environment with All-On-X treatment?

As long as the indication matches, it can indeed effectively improve patients' oral function and regain an easier life.

But does All-on-X simply mean 4-6 implants with a set of dental bridges on top of it?

Can we achieve long-term stable masticatory muscle performance and aesthetics?

What concepts do doctors need to know?

What details need to be paid attention to?

How to evaluate and analyze the type of full-mouth reconstruction is suitable for patients when consulting patients?

After the diagnosis is completed, **how to accurately collect data?**

Are there any tools that can make doctors more efficient?

Why do other people's dentures look natural and beautiful, while mine are either dull or toothy?

What is the ideal digital design for full-mouth teeth arrangement?

Is free-hand dental implantation risky? **How to proceed a fully edentulous patient without adjacent teeth as a reference?**

Fully guided surgery is a good method, but how do I enter the digital world?

It's hard to prepare for final dentures. How to take impressions?

What type of dentures should be made? How to adjust the bite?

WHAT YOU'VE GONE THROUGH IS CLEAR IN MIND AND IS A TRIGGER FOR THE COURSE. WE WILL SHARE THE EXPERIENCE AND KNOWLEDGE OF THE GLD DIGITAL TEAM OVER THE PAST FEW YEARS.

A PLENTIFUL THEORETICAL AND CLINICAL CASE ANALYSIS, WHICH MAKES IT NO LONGER A DREAM FOR THE PATIENTS TO WEAR THEIR SMILE RIGHT AFTER THE SURGERY.
