IMMEDIATE IMPLANT TREATMENT PROTOCOLS - NEW ADVANCES IN TECHNOLOGY

In today's fast paced world, patients expect not only reliable, predictable and personalized treatment options, but they also demand solutions to shorten the overall treatment time. Therefore, immediate dental implant protocols have become more popular, and are validated as safe and acceptable treatment modalities. During this education program, world-renowned speaker Dr. Edmond Bedrossian will present the latest evidence on pre- and clinical performance of newly developed implant technology: from implant material, to the unique macro- and micro design and the best-in-class surface technology. Wide clinical application spectrum that goes beyond immediate implant protocols will be discussed. A hands-on session placing immediate implants will be available on a limited basis.

OBJECTIVES

- Understand the latest technological advances in immediate implant treatment protocols and how it can differentiate your practice. Review the selection process for potential dental implant patients.
- Understand immediate placement and restorative protocols and when such treatment is appropriate, including in zygomatic situations.
- Learn how to utilize digital technology to enhance predictable treatment outcomes for a full immediacy solution.
